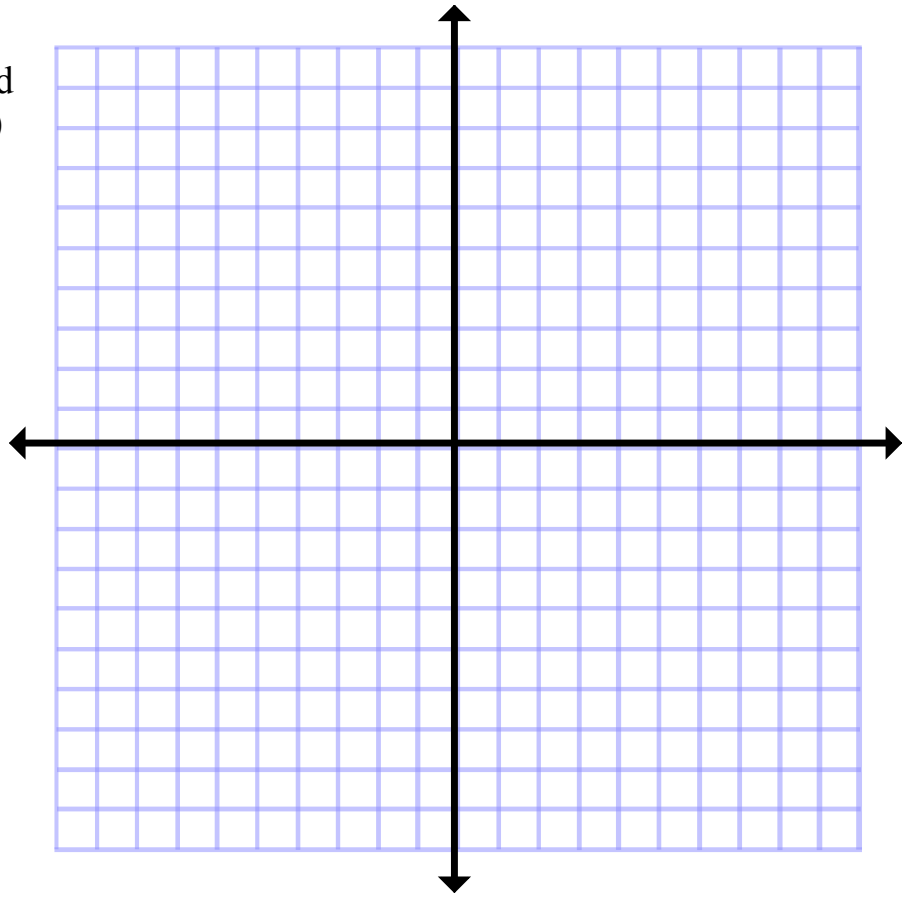
To Graph a Line by Plotting Points

1. Find at least three ordered pairs:
Repeat the process for each ordered pair.
Choose both positive and negative numbers.

Choose a value for x	Substitute it into the equation	Solve the equation for y	Write as an ordered pair (x, y)

2. Plot the ordered pairs on the graph
and label each point with its ordered pair
(they should fall in a straight line)



3. Draw the straight line through the points,
to the edges of the graph, with an arrow on each end.
